

### FIX AUTOCAD HATCH HOLES

Some of the drawings having holes in side hatch, usually it is created by text or any other objects that were included when the hatch was made and even after the removal of that object the hole remains in the drawings

Here's how to fix it:

- Select the hatch or use the command HATCHEDIT first and then select the hatch.
- Click the “Remove” button in the “Hatch Editor” contextual ribbon tab.
- Select the boundaries that you want to be removed.
- Hit enter to finish

As a side note, if you need to include an object, you can click the “SELECT” button to add objects to the hatch.
